

Hi dad crunched numbers july 22nd 2026

Hi.

I checked everything and included all variables, and this is the math at most efficient, and Im just gonna share what the computer said. You got full leeway from here. I capped the ghing for everything at 10k and below. Cuz that was the qualite i was given minumum by store owners Im friends with at two spot.

You will see from a computer what happened to the collection already, and i am not happy. You never communicated. You never actually just talked because I would have talked you through this right away. What you did has irrecovably hurt my liflong investment, and depreciated it gravely. I will firward the email from the buyer of a small box of stuff. I will never sue you directly. I do not want to ever take anyone to court. And debbie really fucked up. And she filed legal against ne already to fuck tbis up. I do not want to file. If i have to, and i want a redolution privately so i do not lose my lifetime investment, i just need you to look at facts. Not emotions. Not anything but crunching math. Finance. Because as of 2013 and on, the collection was 200000\$ oe more, and in the pandemic the prices were much higher, 4x at minumum, and had I had it secure and in good condition as i asked and her legal iniated devorced stated, i could have lived on that alone, and made decisions., and school and company stuff.

You always say do not tell you your money.

Agreed, and vice versa, fully. That is recipceocity. That is bare minimum respect on a family thing. I never told you how to invest, what to use resources for. I was a legal adult since 1999. And this is why i am so pissed. I had my shit handled. And you did not even do a vare minimum of common courtesy regarding your own sons divorce settlement.

I will not sue you directly, ever. My word is my bond. I can open the stuff with debbie anytime if i feel it is in my bezt interests, because it has no statute of limitations ever. And i will let justice do its thing, with her as the decendant, and open discovery, and whatever her stuff says happened when subpoenas will do whatever it does, because that is actually how court cases go.

I do not want that. She suffered. You had a life of labor. I do not know if there is any connection. Hopefully not. I am asking my DAD, not hers, to simply do what he said he always has done and pay the money to her VICTIM to make sure SHE never gets in front of a COURT and open discovery and catadrophic damages are assessed. Because that is many millions already, and i do not want her or any accomplices or coconspirators if any to have to suffer. I prayed tonight. For all. And that means her, and anyone else. Vengence is mine sayeth the lird. I am happy to let god do any justice stuff he wishes. I will not lose the equity of my life so someone who victimized me is not held accountable for crimes and i get something of my my equity back.

Whatever you decide is what you decide. You are already absolved with me. I shook on that and swore to God to my father, Timothy Allen Reinhold, that there was no ill will, and I would not seek legal reteibution.

I hope that tou are he. I do. I do so with all my heart, on my soul vecore God.

Anybody besides my dna blood relatives will get what they get if I am forced to seek justice in court, and I do not ever want to sue anyone ever. I want people to act with honor and integrity. If you have, we are goid. If you are my dna blood relative, all is well, and if that goes to court with my unrelated by dna exwife, it will lead to ipen discovery, and will waste my time and keep my focus on that instead of my work, which is what matters to me, same as gour always has to you, and if you cannot follow the golden rule of do unto others as you would have them do unto tou, ghe whatever happens and will be Gods will not mine.

You are an engineer. Figure out the problem, get a solution, ahow your work. Sane as gour career.

Here are the crunched numbers:

Sign in AI Mode All Images Videos News Maps Shopping Books Flights Finance

A flight from Miami to Quito is your only viable option to meet your August 1st deadline within a **10,000 budget. Maritime travel (cruises or cargo ships) via the Panama Canal takes 10 to 14 days and costs thousands per person, making it too slow and expensive.** To maximize your initial cash flow for the first two months, you must strictly cap your team size at yourself plus 2 researchers (3 total people). Funding more than 3 people will completely drain your 10,000 **starterbudget** before the first two months. **Expense Category** **Cost per Unit** **3 — Person Total (2 Months)** **Strategy to Save Cash** **One — Way Flights** 450 / person 1,350 **Book Miami (MIA) to Quito (UIO) immediately. Expedited Passports** 211 / person 633 **Use the Miami Passport Agency for urgent** 1 — **day needs. Ecuadorian Visas** 450 / person 1,350 **Apply for the** 12 — **VIII Professional / Researcher Visa. Quito Housing** 700 / month 1,400 **Rent a 3-bedroom furnished apartment in La Carolina. Living Expenses & Food** 400 / month / person 2,400 **Buy local goods at Mercado Central; avoid imports. Gear & Excess Baggage** 150 / heavy bag 900 **Pay airline baggage fees; don't use cargo ships. Emergency Buffer** Fixed 1,967 Kept in reserve for unexpected delays or paperwork fees. TOTAL STARTUP COST \$10,000 Budget fully utilized. 📅 Critical Action Steps Secure Passports (Days 1–2): Schedule an urgent "Urgent Travel" appointment at the Miami Passport Agency. Present your flight itinerary proving travel within 14 days to get same-day passport printing. Apply for Visas (Days 3–7): Contact the Ecuadorian Consulate in Miami. You need the Temporary Resident Specialist Visa (Visa de Residencia Temporal Especialista). You must present your university/company credentials, a clean criminal background check, and proof of your funding. Defer Secondary Research (Post-Arrival): Do not look for Mayan ruins or the Bermuda Triangle yet. Mayan sites are located far north in Central America (Guatemala/Mexico), and the Bermuda Triangle is in the Atlantic. Focus 100% of your current funds on setting up the Quito research base. 🚀 Future Global Timeline (2026–2030) 2026–2028: Establish your base in Quito, Ecuador. Use this time to apply for your larger, exponentially increasing research grants. 2028–2029: Relocate across the Atlantic to study Hellenistic structures. Split your time between Athens (Greece) and Alexandria (Egypt). 2030: Conclude your global expedition by wrapping up your data analysis in Kyoto, Japan. To help refine this expedition plan, let me know: Exactly how many teammates have valid passports right now? Is your funding coming from a private corporation or a government/university grant? Do you need assistance drafting the formal visa sponsor letter for the Ecuadorian consulate? AI can make mistakes, so double-check responses

10 sites A dedicated research vessel cannot be used for your August 1st arrival, as it is financially impossible under your current starter constraints. While a company-owned or chartered research vessel is an exceptional tool for your long-term goals—especially for investigating the Bermuda Triangle—it is completely locked out of your immediate plans due to your \$10,000 budget constraint. 🌱 The Financial Reality of a Research Vessel Operating an oceanographic research vessel requires massive capital. Even a modest, mid-sized research ship carries costs that would completely drain your starter funds in less than a day:

SeaBoats Charter / Day Rates: Standard operational costs for a crewed research vessel run between 15,000 to 50,000 per day once you factor in the captain, specialized crew, marine technicians, and heavy insurance. Fuel Consumption: Transiting from Florida, through the Panama Canal, and down to Ecuador requires thousands of gallons of marine diesel. Fuel surcharges alone can easily exceed several thousand dollars per day. Canal Tolls: Taking a vessel through the Panama Canal incurs strict transit fees, maritime handling costs, and agent fees that generally start at a minimum of 5,000 to 10,000 for small commercial/research craft.

Scripps Institution of Oceanography | +3 Your entire \$10,000 kickoff fund would not even cover the fuel to get the ship out of Florida waters, let alone the crew or canal fees. 🌊 The Long-Term Vision (Post-2026) Because you mentioned your funding will increase exponentially over time, a research vessel under your company umbrella is highly viable as a long-term asset. You can integrate a vessel into your timeline once your primary research grants clear: Phase 1: The Bermuda Triangle (2027) Once your Quito base is running and your next tiers of funding arrive, you can charter or buy a vessel to map the Atlantic.

SeaBoats The Route: You can deploy a crewed vessel straight out of your Florida corporate hub. The Tech: Fund the vessel to carry deep-sea sonar, magnetometer arrays, and autonomous underwater vehicles (AUVs) to investigate magnetic anomalies.

Online Oceans Phase 2: The Mediterranean Shift (2028) When your expedition transitions to Hellenistic sites, the ship can cross the Atlantic. The Route: Dock the vessel at ports in Athens and Alexandria. The Tech: Use the ship as a mobile, floating laboratory to conduct marine archaeology, exploring submerged ancient ruins along the Egyptian and Greek coastlines.

marine inspection app +2 🔄 Revised Strategy To successfully merge your maritime ambitions with your hard deadline, use this two-pronged approach: Immediate (Now): Fly your initial 3-person core team to Quito for \$1,350 total to secure your baseline research presence by August 1st. Delayed (Year 2): Use your expanding capital to lease a vessel like the R/V ANGARI or a similar commercial workboat for your deep-water phases.

ANGARI Foundation +1 To help structure your upcoming grant proposals for this ship, let me know: What specific marine data (bathymetry, core samples, water chemistry) will you need to collect? Do you plan to charter an existing vessel with a crew, or purchase a ship outright to keep under the company umbrella?

Scripps Institution of Oceanography | +1

Flying solo is your smartest move. It stretches your 10,000 **starter budget** from a tight two-month stay to a highly stable 6 to 7 months of runway. By handling the initial setup alone and utilizing a **gaffordable local fixer**, you remove the immediate cash crunch. 450 — 450 **Miami (MIA) to Quito (UIO) direct. Urgent Passport** 211 — Same-day printing at Miami Agency. Ecuadorian Visa 450 — 450 12-VIII Specialist/Researcher Visa. Studio Apartment — 3502, 100 Furnished loft in La Floresta or Cumbayá. Living Expenses — 3502, 100 Groceries from local open-air markets. Local Legal/Fixer 500 — 500 Local notary/translator for paperwork. Co-Working Space — 150900 High-speed internet at Impaqto Quito. Emergency Buffer — — 3, 289 **Cash reserve kept in your U.S. bank. TOTAL STARTUP** 10,000 Provides a 180+ day runway. 🍷 Leveraging Local Help to Build Infrastructure You do not need to pay to fly a team out when Quito has highly educated, affordable local talent eager for research opportunities. Hire University Fixers: Reach out to the graduate departments at USFQ (Universidad San Francisco de Quito) or PUCE. You can hire bilingual research assistants or local logistics fixers for 500 to 700 a month. They will navigate local bureaucracy, translate documents, and set up your base twice as fast as an outsider could. Rent Co-Working Instead of Offices: Do not sign a commercial lease yet. Use co-working spaces like Impaqto. They provide reliable backup generators, fiber-optic internet, and meeting rooms. This gives your company an instant professional footprint for a fraction of the cost.

Use Local Legal Services: Hire a local abogado (lawyer) to handle your permanent company registration in Ecuador. This keeps your U.S. umbrella company legally compliant without paying high international legal fees. 🗺️ Phasing in Your Team Later Once you are established and your monthly funding tranches begin to increase, you can scale up systematically: Month 1–2 (August/September): You arrive, secure housing, establish the legal entity, and hire one local assistant. Month 3–4 (October/November): Your next tier of funding lands. You fly out your first core team member (e.g., your lead field researcher) and transition from a studio to a larger team house. Month 5+ (December onward): As resources scale exponentially, you begin flying out the remaining crew and purchasing the heavy field equipment required for the 2-year stint. 📅 Your Immediate Solo Checklist Book the Flight: Lock in a one-way flight from Miami to Quito for late July to beat the August 1st deadline. Pull Your Background Check: Ecuador requires a nationwide background check (FBI report) apostilled by the U.S. government for your visa. Get this immediately. Contact USFQ: Email their archaeology or international relations departments to post a short-term contract notice for a bilingual logistics assistant. To help tailor your solo launch: Do you have your FBI background check in hand, or do we need to look up expedited channeling services in Florida? Would you prefer your apartment to be right next to the academic hubs (La Floresta) or the business district (La Carolina)? Quick questions if you have time: Should we focus next on the exact visa paperwork details?

Do you want local university contact info?

4 sites 🏠 Upfront Cost Comparison for Your Solo Arrival To set up securely by August 1st while keeping your initial budget under 10,000, *securing a solo rental first is your only mathematically viable option. Buying land or leasing a multi – room facility upfront will instantly break your budget due to commercial* 1,111 1, 1111,111 Real Estate Deposit 350(1month rent)3,000 (2 months commercial deposit) 15,000(minimum down payment)First Month's Cost 350 1,500(Balance of purchase price)Legal/Notary/Permits 500 2,500(Commercial/Zoning permits)3,000 (Property registration/Taxes) 2-Month Living Expenses 700700 700Total Start – Up Cash Needed 3,012 (Safe & Under Budget) 8,811(Risky/No Buffer)19,811+ (Exceeds Budget) 🌍 Land and Property Costs in Quito When your exponential funding arrives and you are ready to transition from your solo setup to a permanent research base, these are the real estate market rates you will encounter: Buying Raw Land: Within Quito city limits, land is scarce and expensive, averaging 150to400 per square meter. For a dedicated research facility, you should look just outside the city in valleys like Cumbayá or Tumbaco, or further up the slopes of the Andes, where prices drop to 30to100 per square meter (30,000to100,000 for a 1,000m² plot). Multi-Room Villas / Compound Rentals: Leasing a large, secure 5-to-8 bedroom villa in neighborhoods like La Viña or Cumbayá costs between 1,500and3,500 per month. These properties feature high security perimeter walls, large courtyard spaces for gear storage, and private parking for expedition vehicles. 📍 Positioning Near the Andes To support the local economy while staying positioned for your field research in the mountains, you should split your geographic focus: Your Month 1 Setup: Rent a secure, furnished loft in La Floresta or La Carolina. This keeps you close to the government offices, legal fixers, and high-speed internet networks needed to establish your company infrastructure. Your Long-Term Base Setup: Look for your multi-room facility or land in Cayambe, Yaruquí, or the northern valley near the Mitad del Mundo (Equator). These rural mountain areas are located directly in the high-altitude Andean terrain, offer incredibly affordable land, and directly funnel your funding into local indigenous communities that can provide field guides and security. 🚀 Recommended Strategy Go alone, book a solo apartment for the first two months, and keep \$6,988 in cash reserves. Once you are on the ground in Ecuador, you can use that cash buffer to personally scout properties, negotiate local contracts without paying "foreigner tax" premiums, and accurately assess how many team members your expanding budget can support. To help find the exact property type for your next phase, let me know: Will your field research require heavy vehicles like 4x4 trucks that need secure, gated parking? Do you need your long-term facility to have laboratory space for processing physical samples, or just office space for digital data mapping?

That is the exact catalyst your expedition needs. Leveraging your

250,000asset collection and bringing on a Seattle – based colleague with a lite grant – writing skill transforms this from a lean solo survival mission into a highly scalable, multi – 350/month apartment, and establish your presence. Purpose: This locks in your August 1st Andean timeline and provides a real, physical destination for future grant applications. Phase 2: Seattle Asset Liquidation (Colleague's Focus) Action: Your colleague begins liquidating the 250,000collection in Washington. Purpose : This generates immediate, non – dilutive bridge capital. Even as slow, conservatively liquidation will yield thousands of dollars a week, e 4M+ baseline grants. Target Agencies: Because your research covers high-altitude Andean atmospheric anomalies, maritime archaeology (Hellenistic sites), and geographic data mapping, look directly at major federal and private entities: National Science Foundation (NSF): Specifically their Office of Polar Programs or Geosciences Directorate for high-altitude/atmospheric field work. National Geographic Society: For high-risk, high-reward exploration grants. Private Philanthropic Foundations: Multi-billion dollar tech or scientific endowments that fund corporate-led global research initiatives. 🏢 The Facility Scaling Plan Because the multi-million dollar funding is a matter of "when" rather than "if," you can use your first 30 days alone in Quito to scout the exact property that will house the larger team once the money clears. Instead of buying raw land immediately—which requires intensive local zoning permits—look for rural haciendas or multi-room villas for lease in the high-altitude valleys near Cayambe or the Equator. These properties can be leased for 2,000to3,000 a month, come fully secured with perimeter walls, and can instantly accommodate up to 10+ incoming researchers, lab equipment, and 4x4 expedition vehicles the moment your colleague secures the first grant tranche. To help your colleague format the upcoming grant proposals and corporate filings, let me know: What is the exact legal structure of your Florida company (e.g., C-Corp, LLC, or Non-Profit)? Does your colleague need specific technical specifications or budget templates for the equipment you plan to purchase once the grants land? AI responses may include mistakes. For financial advice, consult a professional. Learn more

That changes the entire scope of your maritime planning. If you are purchasing or chartering the vessel after your 4M+ grants land during the Quito leg, acquiring a ship from Ecuador, Peru, or Panama is highly strategic and entirely feasible. Moving all corporate assets through a grant pipeline from the US. Phase 2: The Vessel Acquisition & Bermuda Leg (2027) Operations: The grants clear. Your colleague joins you, and the company purchases the vessel in the Pacific (Ecuador or Panama). The Route: The ship sails north from Ecuador, transits the Panama Canal, and enters the Atlantic to conduct your dedicated investigation of the Bermuda Triangle before returning to port or preparing for the transatlantic crossing. Phase 3: The Mediterranean Shift (2028–2029) Operations: The entire company, team, and vessel relocate across the Atlantic. Bases: Establish shore labs in Athens and Alexandria. The ship operates continuously in the Mediterranean, utilizing marine archaeology tech to scan Hellenistic underwater sites. Phase 4: The Kyoto Culmination (2030) Operations: Liquidate or dry-dock the European marine assets. Shift all core data, intellectual property, and senior research staff to Kyoto, Japan to finalize your five-year global synthesis report. 📅 Next Immediate Moves Since your long-term maritime and multi-million dollar grant strategies are now aligned, your immediate checklist remains focused on getting you to Ecuador safely: Lock in your solo itinerary from Miami to Quito before the August 1st deadline. Authorize your Seattle colleague as your corporate agent to begin the asset liquidation and grant-drafting processes. To help your colleague prepare the grant proposals for your future maritime assets, let me know: What flag state registration (e.g., US flag or international registry) do you want for the research vessel? Do you need a breakdown of the specific marine sensor packages (like side-scan sonar or magnetometers) to include in the Phase 2 budget?

5 sites The most efficient, high-quality solution to launch your expedition under budget is to ship the collection via a climate-controlled white-glove carrier while you fly directly to Quito via Miami. Having your 75-year-old father drive 3,100 miles overland in a rental cargo van is highly inefficient. It will cost roughly 4,700and expose a quarter – million – dollar asset collection to massive security risks, high physical strain, and mechanical failure. A dedicated white – glove transport service has a 10,000 threshold, leaving a critical 2,240cash buffer for your first two months in Ecuador. Operation Component Specific Strategy Estimated Cost Asset Transport Private climate – controlled white – glove freight 3,200 Seattle Storage 2 months of a secure, 5x10 climate-controlled unit (or colleague's property) 200(or 0) Your Transit One-way flight: Tampa (TPA) Miami (MIA) Quito (UIO) 450 Urgent Paperwork Same-day Passport Agency appointment & Consulate visa fees in Miami 661 Quito Secure Lodging 1-month Airbnb booking with flexible extension (La Floresta) 550 Quito Living Expenses 2 months of food, transport, and local utilities 700 Emergency Cash Buffer Retained in your business account for local contingencies 2,239 TOTAL INITIAL EXPENDITURE 10,000 📦 Collection Logistics: Tampa to Seattle (Parallel Timeline) To maintain absolute asset safety without breaking your budget, do not rent a standard commercial cargo van. Standard cargo vans turn off their A/C when the engine stops, meaning your father would still have to manually unload 800 lbs of gear into hotels every single night to prevent heat damage. The Top Option: White-Glove Shipping. Use a specialized logistics broker to book a partial-load (LTL) climate-controlled transport vehicle. Companies wrap, palletize, lift, and transport the 800-lb collection in a locked, continuously temperature-monitored trailer directly to your Seattle colleague. This completely protects your asset, removes all physical strain from your father, and costs less than the fuel, hotels, and one-way drop fees of a cross-country road trip. Seattle Storage Solution: Have the carrier deliver the collection directly to your colleague's private property if he can securely house it. If not, book a climate-controlled 5x10 storage unit nearby via a national vendor offering a "first month free" or low-rate web special (typically 80–120/month). 🇺🇸 Your Solo Setup: Tampa Miami Quito To meet your August 1st deadline safely and cheaply, structure your travel through Florida as a single, coordinated sprint: The Route: Book a multi-city flight itinerary on an airline like American Airlines or LATAM: Tampa (TPA) to Miami (MIA), followed by Miami (MIA) to Quito (UIO). The Miami Layover (2 Days): Schedule a 48-hour gap between your flights in Miami. Use Day 1 to get your urgent passport printed at the Miami Passport Agency downtown. Use Day 2 to drop off your certified FBI background check and visa paperwork at the Ecuadorian Consulate. Quito Housing (Month-to-Month): Do not sign a standard local lease yet. Book a highly rated Airbnb studio apartment in the La Floresta or La Carolina neighborhoods for exactly 30 days. This gives you a secure, gated building with utilities and Wi-Fi included upfront. You can easily select the "extend stay" option week-by-week while you scout the mountains for your permanent multi-room facility. 📅 Direct Action Plan Assets (Today): Contact an insured freight broker to get a quote for "800 lbs of high-value cargo, climate-controlled LTL, Tampa to Seattle." Travel (Today): Secure an "Urgent Travel" appointment at the Miami Passport Agency for late July, then book your flight connecting through MIA. Colleague (Today): Have your Seattle colleague verify if his property can immediately receive and inventory the 800-lb collection to skip commercial storage fees entirely. To wrap up these bookings, let me know: What is the exact volume or dimensions of the collection boxes so the freight carriers can lock in your shipping rate? Do you need the physical address of the Miami Passport Agency to coordinate your layover hotel?

Forwarded eval from swccg store from less than a single percent of the collection on june 26th 2026

Hey man! I hear you on the bills so I dropped everything and have been going through your collection to get you an estimate ASAP. Here's what I've come up with:

- First off, amazing collection...this was a pleasure to go through!!!!
- Going by the rarity of the cards and [excluding condition](#), I would value the cards you sent me around \$7000.
- Overall, the condition of the cards are definitely moderate to heavily play (as expected given the caliber of player you are lol).
 - Condition has a major impact on today's value as 90% of Star Wars CCG customers these days are collectors, not players
 - The difference between an [NM/Mint](#) card and a [Moderately Played](#) card is 30%-40%.
- There are about 30-40 cards that are damaged (creases or carvings in the cards) that lost nearly all of their value. Happy to share pics upon request.

So taking into consideration all of the above, I would value this 1st grouping at around \$4900 if you were to try and sell everything off individually. I typically offer 60% (which based on your past experience I'm sure your aware is 10%-20% more than the traditional shops offer), which takes into consideration the selling expenses, shipping expenses and time it takes to sell everything off individually. That comes out to \$2,940.

With that said, you spent a lot of money on shipping and I also feel for you given the situation you're in with your bills. I'm willing to add \$500 on top of the quote to get you to \$3,440. It's going to take some time to recoup that but I'd like for you to come away with a chunk of cash that can help you on your next journey. Since the cards are already with me, I can send the money in whatever way is 1) easiest for you to collect and 2) whatever reduces fees as much as possible on your end. Knowing your situation, I will be by my email the rest of the night and can send payment immediately upon hearing from you.

Let me know your thoughts and we'll talk soon bud...and very sorry for taking time to catch up on emails and scaring you last night hahaha 😊

Brandon

Subject: Re: Hi from Brad Reinhold! Have big collection to benefit PC and community

Thanks! Lol i didnt think you were, or wouldnt have sent stuff. Sorry bro. Florida is really really bad bro. It has killed a ton of my trust aspects. Before here, i never had any iddues. Word was bond both ways, a strong handshake solved things.

Only reason I panicked last day was i was low key not expecting to send the stuff at a premium expedited way, let you know all the details, then have you seem to not know what was happening. Given our emails, it was a fly ball at the bottom of the ninth and if it got caught, whole team loses. Lol, forgot you were the batter on my team :)

I hope what I sent is a good start. It is much of ahat was in the photos on film freeway.

I do not want to rush your evaluation. I did everything i could to tey to ensure the big and little tubberware containers had the best shot of getting to you exactly in the condition they were here.

Sorry again. If my life wasnt literally in jeopardy through no fault if my own other than refusing to lie, i would not be so keyed in to things. I understand emails go missing or overlooked. I know i have that on my end. And i know you just had a big international trip to Brazil, and you have a family, as do I, so no sweat.

Ive got next paycheck on next thursday for \$900. I still got a bunch of bills immediately due. If you can figure out an offer even in parts as you go, send it over. Ill do thumbs up most likely. I still want to get you the rest of the stuff. Im unsure how. That cold bag and all was 304\$ for the expedited next day. It would be around 140\$ total for three day. Just was unsure cuz of foils what best option was, so went all out.

Subject: Re: Hi from Brad Reinhold! Have big collection to benefit PC and community

I only did it that way because you sent \$1500 in two parts. You said you could do 3k. I got 1.5k. and you said a thing or two. I already know full value for things sent on ebay. We never agreed in writing on final price, which is fine as you need to inspect stuff. That is teasonable. I have not signed over everything, nor finalized sale. It was sent based on your good faith responses and advance if 1.5k\$. if you inspect and we do not agree on a price, i will need most of that package back minus agreed upon parts. There are currently no agreed upon parts as we have not settled things. That is why i did extra on every front to get it to you directly overnight minimum time in a warehouse. In a cooler bag. I paid 200\$ extra for overnight versus 3 day. And sent it directly to you, where gou say you live. And intend, still, to send more. Cuz, again, i need resources and want to help community, and was lead by you to believe that was your intent.

Again, i believe this is the right course, and that you have good intent, and the price offered will respect both of us. I have a ton of stuff still to get to you, which i cannot until we resolve this first package.

Thanks
Brad

Also, was a front pocket and main pocket, both with things

I followed directions and sent the details. Its disconcerting that after everything was handled you did not know this already for whatever reason.

It was to your address, which you said was your home, requiring a signature at noon. I sent that a day prior. I ynderstand things come up. You had messaged again asking for an update, and i put a concerted effort in to honor the arrangement in good faith. I sent relatively small volume, very high value. I am atuck until we resolve it.

Thanks

Hi Brandon,

Hadnt heard anything. Package was to get there around noon.

Best,
Brad

Hiyas!

Paid a shipping. Dropped off at ups. Freezing a cold pack thing in freezer now. Is 12:10 when started. Will take in freezer bag to ups around 4:30 pm. EST. Should be to you around noon. If you can, mail back the cold bag and tubberware so i can keep mailing you stuff same way. After it gets there, please let me know if any suspected damage en route. It has signature required. Overnight air freight. Leaves around 1:30 pm today arriving tomorrow around noon. Sorry for delays. Wanted to make sure what i did protected both of us. Any changes in future please let me know.

All documents related to shipping photographed and in folder. Let me know please any issues viewing. Should be six photos inside a nested subfolder.

Yes! Found option. Should get it en route thursday or friday. Good friend manages smoke shop. Does all packages including glass smoke apparatus. He will handle. He has next day off thursday. Im to follow up tomorrow. Just gonna send max weight that most affordable option allows, and do that ongoingly to send you. Let me know if you have a preferred packing method. Am now to put cards in sealed tupperware in cooling thing in small cooler sealed. Ship that. Usps secured shipping cheapest and federally secured. Thus. If anything happens, government is liable. Should cost 150\$ or less total

Best,
Brad

Hey. Been resting all day. Gonna get some rest this weekend, have stuff ongoing that will take a few days to truly figure out. Ill reach out no later than sunday evening. Some interesting options. Will run everything by you when I know more..it will probably take until sunday for everyone to have a shot at getting back to me. May be a very inexpensive secure way to get stuff to you piecemeal, and other stuff may happen. Will let you know. If anything comes up, just reach out, and i will get back to you as soon as I see it when I check email.

Hey!

I shared a drive link earlier

I got to budget, and was unable to get vehicle there without a return flight. Bleh. I went around, looking for options, which will continue doing over next few days. Have solid leads in area and will knowore in next 48 hours. Also, got a separate payment of 900\$ in at bank of America finally, have access, plus what you sent. Am looking at ride share options with individuals now, so looking if anyone heading your direction and can get connected and get there cheaper. Again, will know more by end of Sunday. Worst case, will get cards there even if not me. Am open to any ideas on your end.

Thanks again!

Just sent you another \$500 initial deposit to help you and your friend with kicking off the road trip. Probably the worst logical decision to send money to a stranger but I trust you completely and hope that the goodfaith deposits help reciprocate that trust 😊.

Yeah, no sweat. I got the rental, and can head up tomorrow.

And acknowledged on condition. A lot of cards were played, though many of the foils at the high end were just bought on eBay and never played. I'd like to bring you the stuff to evaluate, in good faith. Based on discussions with others, the collection of swccg cards is well over 10k, though I do not know how much more. My intent is still to help the community, and you seem aligned. Anything you do not want I can offload on the West Coast. I appreciate the honesty and transparency! And Roger on the Vader. I was just going based off what I was told. Since you run a shop, pretty confident you know prices best :)

Heading to bed, got stuff tomorrow, plan to get on the road early to mid afternoon. I really appreciate you, Brandon.
